

## Application Software

The correct choice of software is critical to any business. Equally critical is the implementation, so that budget constraints are taken care in such a way that the resources are balanced. If this is done properly, companies do not end up with unused expensive software licenses. It is important to remember that in a given situation, the hardware may be only 20% of the total value of a computer system. Almost all IT resellers can supply you software, but only a good IT supplier will help you reduce the overall burden. The UAE piracy law is very encompassing and in a lot of cases, information about licenses is wrong. This is where we come in. We have very vast and varied knowledge, with which you can save money, implementing this legal requirement. We may even recommend and support free software, if that is what it takes to solve a client's requirement.

We supply application software ranging from the ubiquitous Microsoft Office products to specialized CAD and security software. In July 2007 we were appointed as sole agents for CADOPIA, BrowseControl & AVG Anti Virus Softwares.

The range of software that we supply, are varied and mostly in tune with the requirements of our clients. Some of them are very specific. For example Browse Control allows or clients to save extra internet bills by controlling who gets access and when. It also protects the network by not allowing users to run unauthorized software like messaging applications. CADopia gives companies full Autocad ® compatibility at a fraction of the price.

### Application Software (Sales & Technical Support)

- Microsoft Applications & Networking software Licenses
- Retail & Enterprise products from Symantec, AVG, Adobe, Autodesk, Cadopia and others
- License Fulfillment & Legalization

### Networking Software (Sales & Technical Support)

- Microsoft Windows 2003 Server / Small Business Servers
