

## Telephony & Network Cabling Services

Telephony is a very big and important part of our organization. Communication services are in an advance state of automation. This has resulted in the overlap of a lot of facilities that used to be the sole domain of analog telephony. The newer digital and hybrid systems are more network aware and in most cases can be used with VoIP technology (Telephony over the internet). This has resulted in Computer World taking a active part in the installation , maintenance and support services for telephony and networking.

We have the right resources to tackle any mid-size networking requirement. From supply of networking and routing equipment to workstations and servers - we do it all. equipment, switches, routers and connect and configure them. One needs - from premise cabling to equipment. We are partners with inhouse) with advance digital and VoIP connectivity, voice mail and messaging.

cabling and configuration of We supply cabinets and allied servers; lay the cables, physically source for all your voice and data installation of advance telephony **Avaya** (which is also installed

In Cabling we are capable to do small to medium size cabling from 5 to 500 within the scope of structured cabling, complete with rack, patch panels and switching. All equipment and installation from a single source allows easier management of projects. We have experience in working as a team with a wide variety of interior designers and Office equipment suppliers.
